Course: DI-322 Web Technologies

Assignment 04
Topic: Slides Application (Frontend only)

Submission Date: Tuesday, October 20, 2026 11:59 PM
Marks: 10

Instructions:

- This is **not** a group assignment. Copying assignment is **not** allowed.
- You have to upload your assignment on GitHub, name your repository **`webtech-assignment04`**. Keep the repository public. A form will be provided later for submission of your repository link in it.
- Usage of AI tools such as ChatGPT, Copilot, Claude and others is **not** allowed.
- In case copying or AI usage is identified the assignment will be marked **-10** points.
- Submissions after the deadline will not be considered, and the student will be awarded 0 marks.
- You have to do this assignment using HTML, CSS, and JavaScript.

Tasks:

1. You have to create slides using Markdown file
2. The application should have the following features in it:
    a. Create Slides
    b. Edit Slides
    c. Save Slides
        - Save the slides in the browser's internal memory
    d. Present Slides
3. There will be only 1 markdown file for all of the slides in 1 presentation. The 3 dashes '`---`' in the MD file which generally denotes a break line in document will be used to differentiate between Slide 01 and Slide 02.
   For example:

```
# This is Slide 01
## This is Heading 02 in slide 01

This is your content on slide 01
---
# This is Slide 02
## This is Heading 02 in slide 02

This is your content on slide 02
---
So on...
```

4. Your create and edit screen of the application should have 2 sections.
    - 1 section for coding the md file
    - 1 section for viewing realtime changes on the slides

5. On both the presentation screen and view section in create/edit page there should be 3 buttons available. Left, Right, and Full Screen.
    - On first slide, left button should be disabled
    - On last slide, right button should be disabled
    - In presentation mode, the full screen button should display the exit full screen icon or text. When not in presentation mode, the button should display a full screen icon or text.
6. In compliment to the left, right and full screen buttons. Your application should also perform likewise with right arrow key press, left arrow key press, F11 key press, and Ctrl+S key press.
7. On all of the slide screens it should show slide count at the bottom
    - format : {current slide number} / {total number of slides}
8. You should be able to save your slides in the browser's internal memory. Such that when the browser is closed, and opened up back again the slides should be able to load once your project is loaded on the browser.
